UX vs UI in a nutshell

UX stands for ‘user experience’.

The user experience relates to how a user feels whenever they interact with a product or service. It’s not a physical, tangible thing—it’s the ease and user-friendliness of the interaction as a whole.t

UI stands for ‘user interface’.

:The user interface relates specifically to the screens, buttons and other visual and interactive features a person uses to interact with a digital product, such as a website or app.

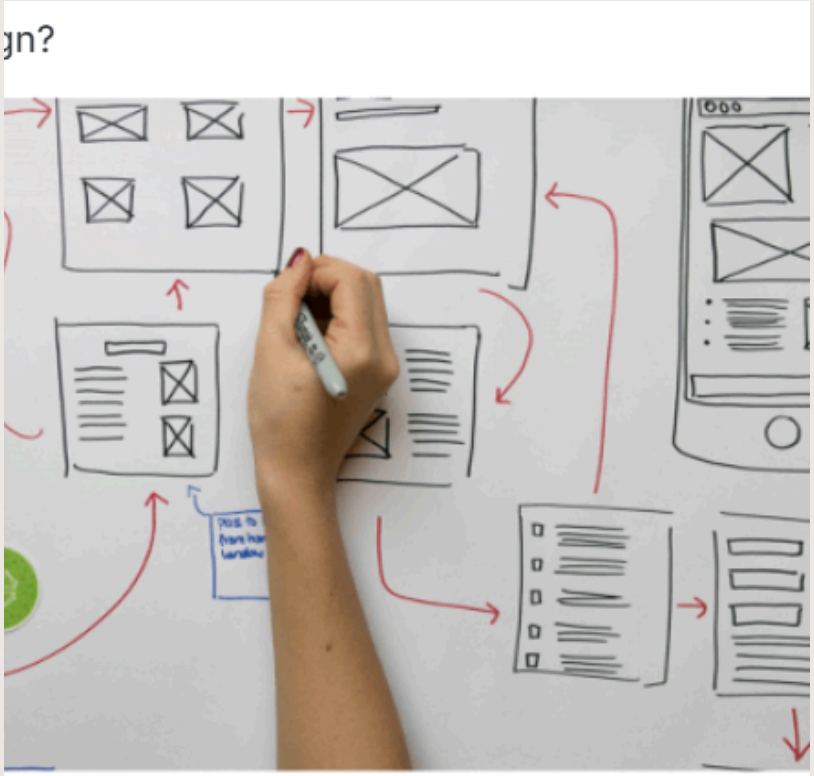
UI stands for ‘user interface’.

:UI design is the process of designing how digital interfaces look and behave

UX stands for ‘user experience’.

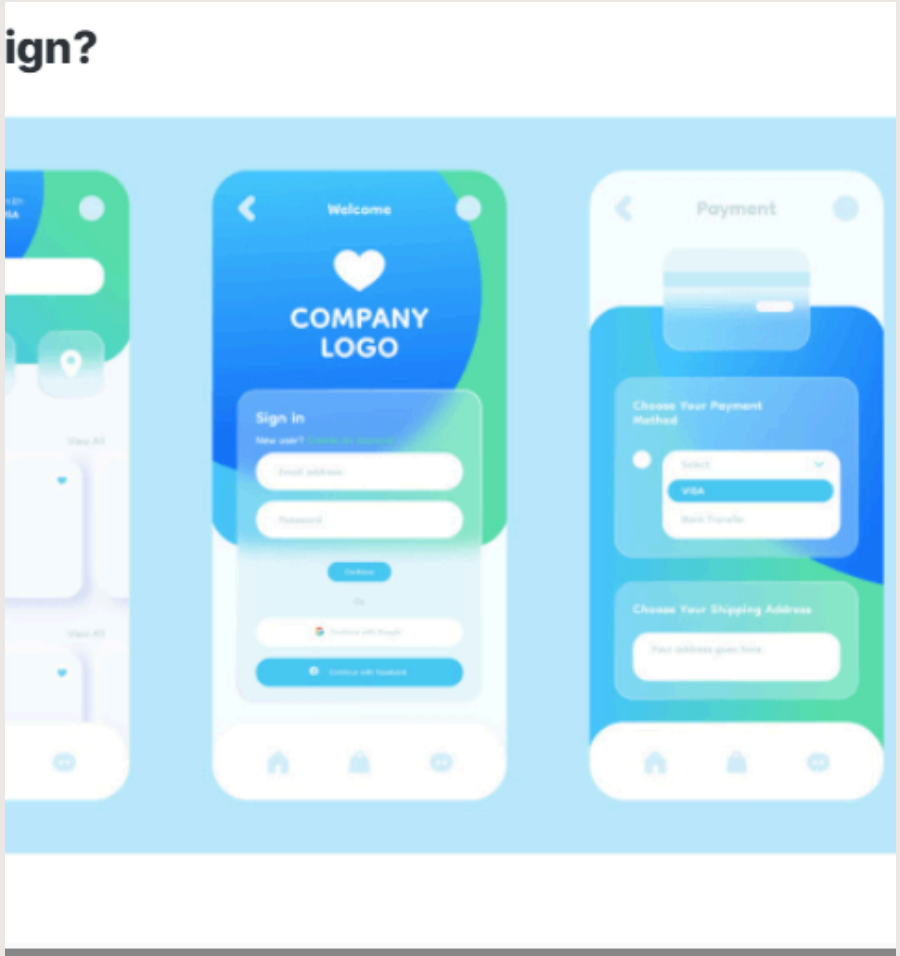
:UX design is the careful planning and creation of the user experience and everything it entails.

What is UX design?



UX design is a vast discipline that encompasses every aspect of a product or service that the user comes into contact with—and considers how all of these aspects fit together to make a user-friendly whole.

What is UI design?



UI design covers one specific aspect of the overall user experience: the look, feel and behaviour of digital user interfaces.
